

Dr. Johnson is a general pediatrician with a passion for newborns and early parenting relationships. She completed her undergraduate studies in Health and Society at Brown University and earned her medical degree at Harvard Medical School, followed by pediatric residency training at Mass General Hospital, where she also served as chief resident. After devoting the first decade of her pediatric career to primary care, she turned her focus to the care of newborns and their families. For the past 22 years she has worked as a newborn hospitalist at Brigham and Women's Hospital, where she was medical director of Well Newborn Care from 2001 through 2018. Dr Johnson has been on the faculty of the Brazelton Institute at Boston Children's Hospital since 2001, serving as Institute's Director since July, 2022. She is trained in the Neonatal Behavioral Assessment Scale and is a co-author of the Newborn Behavioral Observations System (NBO), the topic of today's presentation. She was principal investigator for the Health Resources and Services Administration-funded BabyAMOR study, a randomized controlled trial examining the impact of an NBO-based intervention to support mothers and their preterm newborns. Dr. Johnson is an Assistant Professor of Pediatrics at Harvard Medical School.
